

TIMELESS NORWEGIAN CRAFT

Jøtul's cast iron wood stoves are hand made in Norway. Founded on a proud tradition, we have combined solid and beautiful handicraft with the art of fighting off the cold for more than 160 years. This is the foundation of our current position as market leader and the preferred choice for customers all over the world who want the best.

CAST IRON – PREFERRED BY GENERATIONS

The choice to produce our products from cast iron is exclusively based on the material's extreme high quality and durability. Wood stoves from Jøtul do not deform, the doors stay in place, and hinges and closing mechanisms remain reliable even after long-term use. In addition, spare parts extend the longevity of a Jøtul product further.

PURE HEAT FROM NORWAY

Norway is known around the world for their focus towards sustainability and the environment and we have the strictest demands regarding emissions in the world. This is why Jøtul strives to maximize fuel utilization and optimize the heating effect from all their products. This is good news for your wallet and the environment.

AWARD-WINNING TIMELESS DESIGN

Jøtul products represent functional, modern design. They are innovative, yet stand the test of time beyond short-term trends. At Jøtul, we are convinced that form should follow function, and that good design is more than meets the eye. Several of our products have been recognized with design awards.

JØTUL F 370

ENJOY THE HEAT FROM A MODERN DESIGN STOVE

The Jøtul F 370 is characterized by a timeless, award-winning design, and it is one of the world's best-selling wood stoves. The combustion chamber is surrounded by glass windows, creating an optimal three-sided fire view. This wood stove is the first and only in the world to have won the prestigious international Red Dot Design Award: Best of the best.

JØTUL F 50 TL RANGELEY

TOP LOADING
CONVENIENCE

Jøtul's signature cast iron and steel stove, the Jøtul F 50 TL Rangeley, paved the way for what would become Jøtul's hybrid line of convection/radiant stoves. Utilizing Jøtul's patent pending rotating baffle, the Jøtul F 50 TL Rangeley can be easily loaded from the top with the turn of a handle.

JØTUL F 500 OSLO

HOT. VERY HOT.

The Jøtul F 500 Oslo is large enough to heat your entire house during those long cold winter days and nights. With its signature Gothic arch design and large fire viewing area, the Jøtul F 500 Oslo is the highest volume large non-catalytic cast iron wood stove sold in North America.

STOVES

Throughout the years, this line of freestanding wood stoves has earned a reputation for being some of the best on the market for heating properties, quality, and durability. This group contains small, medium, and large stoves so you can find the perfect one for your space. They are easy to use, and the flexible range of heating capacity makes them just as suitable for use on a chilly autumn evening as on a cold winter's day.

JØTUL F 602 CB

Eva Horton, the pioneering importer of Jøtul stoves in North America, shared the warmth of this stove with her neighbors in Maine in the early 1970s. Her early efforts led to Jøtul earning the dominant position in the cast iron hearth industry that it still enjoys today. The Jøtul F 602 CB “Little Giant” is the very definition of classic and comprises half of our Heritage line of wood stoves.

HEATING CAPACITY: Up to 1,300 sqft
MIX/MAX HEAT INPUT: 23,750-33,000 (NG)
21,000-33,000 (LP)

VENTING: Direct vent
WEIGHT APPROX: 155 lbs.

FIREVIEWING AREA:
29.25" W x 13.25" H

COLORS:

- Black paint
- Blue black enamel

ACCESSORIES: Wall thermostat, remote control, simple steel surround, trimable steel surround, fire screen, two brick panel kits

“ You have every reason to feel good when you are enjoying yourself in front of a stove from Jøtul .

We are at the forefront of environmentally friendly hearth technology.

For us, clean combustion is a matter of course. ”

RADIANT AND CONVECTION HEAT

Cast iron can handle extreme heat, retains it well and releases heat evenly. In our product range, you will find wood stoves with radiant heat as well as convection wood stoves.

Radiant heat

Radiant heat is released as invisible light. These rays go through air until they hit a material that absorbs the rays. This material will then start to heat up. This type of heat is good for rooms with high ceilings, in drafty houses or other places where you want rapid and direct heat from the fireplace.

When arranging furniture and other objects, you should be aware that the temperature near the fireplace can get very high. Freestanding screens may be used to stop the heat rays in certain directions.

Convection heat

Convection heat is created when the air around the wood stove becomes warm, expands and rises. If the wood stove has a convection chamber (plates on the sides with openings on the top and bottom), the air between the wood stove and the plate will get warm more quickly. The heated air rises and distributes the heat around the room. The warm air that gathers up under the ceiling can easily be distributed down to the floor with a ceiling fan.

When using convection heating, it takes a bit longer to heat up a room when compared with radiant heat.

Both convection and radiant heat

Most fireplaces are a combination of a radiant and convection product. On the front of products with a glass door, the heat will radiate through the glass.

On the back, convection plates are usually installed to protect the wall. Most often, it is the construction on the side walls that determine whether the product is a radiant or convection wood stove. In reality, almost all products are a combination.

QUALITY OF JØTUL ENAMEL

The art of applying a high quality, durable porcelain enamel finish to cast iron begins at the start of the production process by ensuring that the composition of the cast iron is suitable for enameling. With 160 years of experience producing cast iron products and over 50 years of experience applying porcelain enamel to hearth appliances, you can be assured that you'll be enjoying a maintenance free, easy to clean finish for years to come.

Whether you prefer a matte, medium gloss, or a majolica porcelain enamel, there is a finish to suit your taste.

The secret behind our remarkable enamel quality is the production process. The moulding process itself is vital to get cast iron of the correct quality, which is a requirement for optimal enamel quality. Before the products are coated with the enamel, they receive one more round of sandblasting to remove oxides and graphite from the surface and to make it rougher so that the enamel can attach itself properly to the cast iron.

Today, we deliver products in different degrees of gloss. Some have a matte finish, others are glossy, and we also offer products with majolica enamel.

The common denominator for all the enamelled surfaces is that they are durable and maintenance-free, so that you and your family can enjoy your Jøtul wood or gas stove for generations to come.

OUR SELECTION OF ENAMELED SURFACES
